

PRIAMUS - the experts for the injection molding process

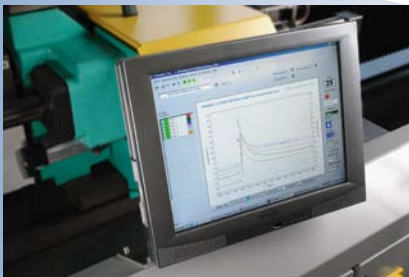

Process control with Priamus Fill & Cool

The automatic hotrunner control system for:

- High quality standards
- Consistently balanced cavity filling
- Less scrap
- Increase in efficiency
- Process reliability

Process monitoring with Priamus Monitor

The mobile data acquisition system for:

- Real time process monitoring
- Real time process control

Process monitoring and control with the Pass Controller

Green indicators show good parts.

- Very easy handling
- Process repeatability
- Automatic online viscosity monitoring
- Display of production efficiency

Wide variety of sensors for many different applications

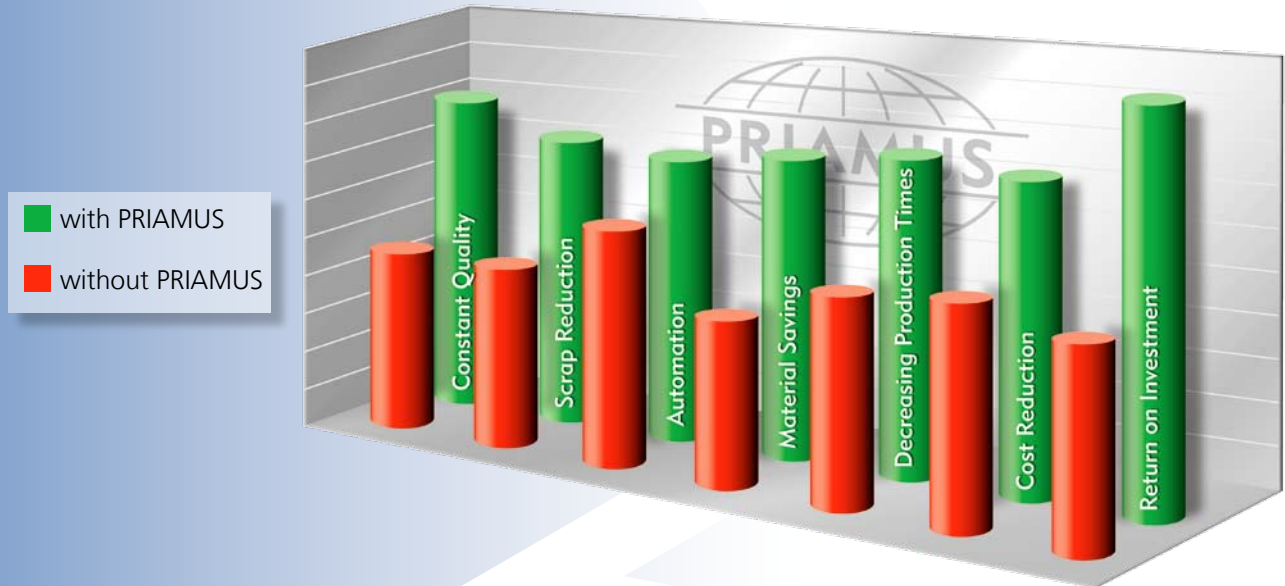

- Innovative sensors for cavity temperature and cavity pressure
- Small, safe, state-of-the-art technology

Benefit with PRIAMUS

The pressure to achieve always higher returns on investment is more and more linked to a rising product complexity, smaller batch sizes and production shifting to cost-effective sites.

Also, economical considerations with a view to minimize costs by reducing scrap, saving material or achieving shorter cycle times confront the manufacturers with apparently unsolvable problems.

The key answer is automation of the injection molding process. The experienced PRIAMUS team can help you to get your return on investment under control again by proposing a series of smart and proven systems. Ask our partners.

PRIAMUS - the reliable partner

These clients trust our products and services.
